GUIDE

Stay On the Cutting Edge with FastLane!

Toughbook 29 powerful, rugged and Wireless

Mobile Computing & Networks

Whether your need is for one mobile mounted laptop or several mobiles with a wireless link and file server,

Fastlane knows computers. Offering a wide variety of ruggedized computing and mounting solutions for mobile and command use, FastLane brings technology to the scene FAST!

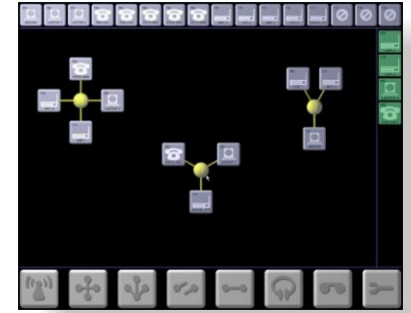

The Panasonic ToughBook 29 is just one example of rugged computing technology. FastLane offers mobile computers in a stand-alone or integrated layout and is ready to hear what your department would like to "link-up" on the scene.

Ask your FastLane rep about how high-tech your next FastLane vehicle can be.

Radio Inter-Operability System (RIOS)

FastLane offers the SR-3001 Radio Inter-Operability System (RIOS) as an integrated option in all of its custom command and response vehicles. This system allows the commander to interconnect radios from many different communications systems into one seamless service.

The system features a graphical user interface (GUI) that provides a display of the radio interconnects. Shown at the top of the display are the radios, phones, and computers that are available to be interconnected. At the bottom of the display are the functions that are available to the user. In order to perform any of the available functions, the user simply touches (touch screen) or places the pointer on the function and clicks the mouse.

For more information, ask your sales rep for a RIOS brochure and a demonstration.

Mobile ThreatNET XM Weather System

Nationwide weather information delivered by the XM WX Satellite Weather service -- Mobile Threat Net™. Emergency situations are often caused, hampered or complicated by encroaching or severe weather. Keeping informed with current weather situations is imperative. Mobile Threat Net delivers revolutionary continuous access to the most comprehensive and reliable weather information in the field for quick and accurate decisions. State of the art S-Band satellite transmission gives you the most reliable 24/7 signal available.

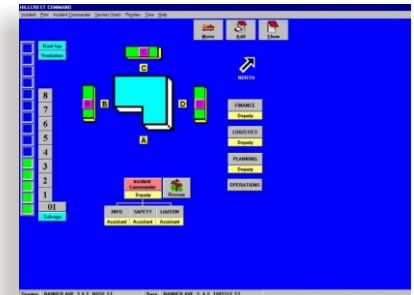

Get Mobile ThreatNET in your next FastLane vehicle.

Incident Command Software

Are you a control freak? No technology solution would be complete without a piece of software to help you organize it. Do you want to know where all personnel are on the scene, have permanent documentation of events, show visually where teams are deployed, time all personnel in hazardous atmospheres and be in control of the scene? Then FIT-Notes is the perfect solution.

Ask your FastLane rep to include a copy of FIT-Notes with your next command vehicle!

GPS Navigation & Location

FastLane knows that you cannot do your job if you can't get to the scene. That is why FastLane offers the most comprehensive line of GPS navigation and resource location system available in today's first response vehicles.

Magellan, Delphi, Pioneer and TrakNET are just some of the systems that are available as an option in your new FastLane vehicle. Whether you need detailed turn-by-turn directions or simply latitude-longitude coordinates, FastLane has the system for you.

Satellite/Cellular Voice & Data Communications

FastLane is an authorized Cingular Wireless and Iridium Satellite dealer, offering a wide variety of voice and data communications solutions whether it be land based or celestial.

Stand alone, portable and integrated solutions are available for sending data, fax transmissions and voice communications via cellular, CDPD, GMRS, GSM and satellite. Whether you are looking for day to day cellular solutions or disaster back-up communications such as satellite phones, FastLane can deliver.
